

ABSTRACT OF THE DISCLOSURE

In a device for providing wall ducts for conduits, tubing or electric cables for motor vehicles, each of the conduits, tubing or electric cables, in the area of the wall duct, has a coupler. Each coupler includes two coupler halves. First coupler halves, respectively, are jointly held in the device providing wall ducts. The first coupler halves are held together in groups of at least two by a bracket, and the coupler halves bundled this way are held in plugs, which are arranged in orifices of a wall.
